

Are you sure your data is safe?

Uncovering hidden data before it's exposed.

Shadow data discovery, knowing exactly what and where your data is, and the effective management and protection of sensitive data is essential to maintain regulatory compliance and safeguard against data breaches.

82%

of data breaches involve data stored in cloud environments¹

39%

of breached data is stored across multiple environments¹

average savings leveraging Security AI and Automation vs not¹

Bad data security posture is costly

Loss of control and data visibility across environments makes it hard to protect data from a single location.

Overwhelming noise of too many anomalies to investigate and prioritize, spamming Security Operations.

Compliance struggles accessing retained audit data and coding or manually creating reports and workflows.

Legacy architectures aren't ready to shift to cloud-native infrastructure and can't scale dynamically.

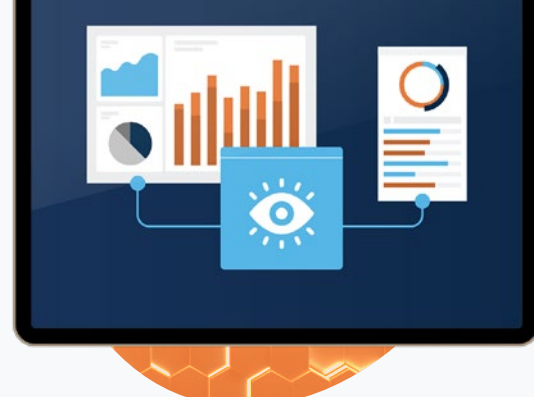

GenAI pipelines are being developed without being properly secured.

Take control of your data security in the cloud with Archetype SC

Data security posture management (DSPM) provides compliance and security teams with the essential visibility and insights to ensure your company's sensitive data is secure and compliant with relevant security policies.

One solution to secure it all

IBM Guardium Insights SaaS DSPM is a one-stop solution that discovers shadow data, analyzes data flow, uncovers data vulnerabilities, automates data mapping and classification (including PII identification), and helps remediate vulnerabilities in underlying data stores. Moreover, for organizations that have initiated or established GenAI pipelines, Guardium DSPM offers a solution to secure these systems.

Data visibility

Discover shadow data (including unstructured data) and identify sprawls within cloud providers and SaaS apps.

Data movement

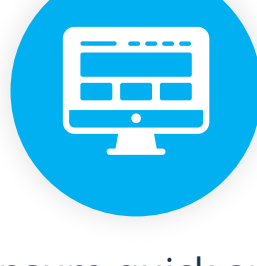

Analyze potential and actual data flows within cloud environments to proactively address vulnerabilities.

Data protection

Uncover vulnerabilities in data and compliance controls and posture to prioritize remediation recommendations.

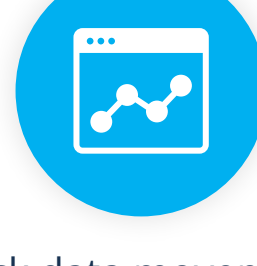

With Guardium Insights SaaS DSPM, you can:

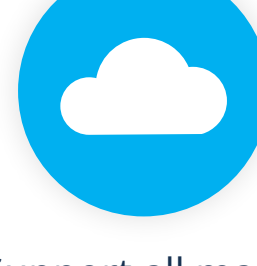

Ensure quick and easy deployment

Automate data inventory

Track data movements and access

Support all major cloud providers

Safeguard your business

A strong partner to strengthen your posture

Cybersecurity doesn't have to be complex or difficult to be effective, especially when you have a partner like Archetype SC on your side.

IBM partner since 2000

Guardium certified

All resources based in U.S.

Identify gaps before they become threats

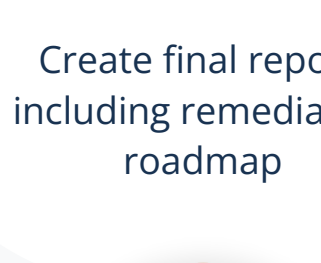

Archetype SC is offering a no-obligation Data Security Assessment powered by IBM Guardium Insights SaaS DSPM to identify gaps in your cloud.

Scan environment with IBM Guardium Insights SaaS

Analyze scan output against objectives and best practices

Create final report, including remediation roadmap

Review current cloud strategy with key stakeholders
